DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Those covered by the elected generic formula Ia.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Subgeni.

The following claim(s) are generic: 1

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Unity exists between chemical compounds when there is a technical relationship among the claimed compounds involving one or more corresponding special technical features. A special technical feature is a contribution which each of the inventions, considered as a whole, makes over the prior art. See, PCT Rule 13.2 and M.P.E.P. Appendix AI, § 206 and Annex B.

Here, a common special technical feature share by the recited compounds cannot be identified since a common structure is not present, i.e., a significant structural element shared by all of the compounds cannot be identified. In this regard, a common chemical structure which occupies a large portion of their structures is absent by the generic formula (I), in claim 1.

Moreover, a recognized class of chemical compounds in the art to which the invention pertains cannot be identified. There is no structurally distinctive portion in the generic formula that links the covered species.
